

MOBILE DECONTAMINATION UNIT

EASY TO ASSEMBLY

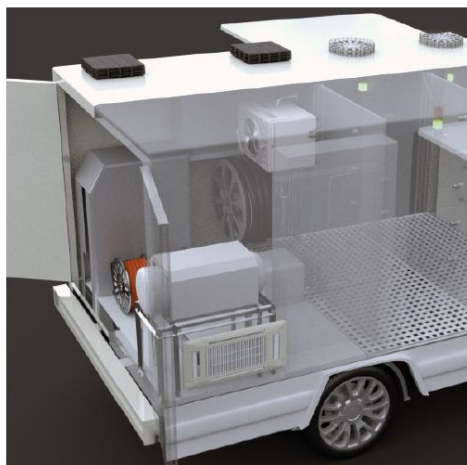

1 - 2 PERSON DEPLOYMENT

COMMERCIAL DESCRIPTION

UTILIS, the class-leading developer of decontamination solutions, introduces the new mobile decontamination unit.

DESCRIPTION TECHNIQUE

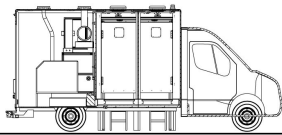

- ▶ The decontamination unit comprises of a re-mountable cell installed on a chassis-cab platform, divided into two functional compartments :
 - A technical compartment, located at the rear of the cell, contains all necessary equipment for utilities provision; including power generator, water supply, heating and control panel, etc. All of the equipment except the generator is pre-integrated within the cell, remaining permanently in place throughout operation. The power generator is mounted externally and connected via a 10 m power distribution cable.
 - A shower compartment is located at the front of the cell, with an extending cover forming a reception area, undressing compartment, decontamination shower compartment, rinse shower, dressing compartment and a receiving area.

MOBILE DECONTAMINATION UNIT

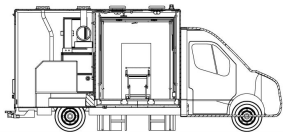

Two separate units for ambulatory casualties and non-ambulatory casualties

UNIT A

The unit permits decontamination for ambulatory casualties, comprises of two distinct decontamination lines.

UNIT B

- ▶ This unit permits decontamination of stretcher-borne users, via a roller supports structure allowing users to proceed through the system in sequence. The cell is composed of a single decontamination line due to the workspace necessary around immobile users during decontamination. Due to its design, the cell can also be used to process ambulatory casualties users.
